

Fizzl Firmness Test – Unmold Readiness

1. Surface Check

Tap the top of the tablet – it should feel dry and slightly cool to the touch.

2. Press Test

Gently push on the side of the tablet while still in the mold. It should feel firm and compressed.

3. Gentle Pop-Out

Select one test tablet and press it out slowly from the mold.

 **If it pops out cleanly, you're good.**

 **If it crumbles or sticks, let them cure longer.**

4. Sound Test (optional)

Tap a demolded tablet on a hard surface. A clear, sharp “tap” means it’s solid.

Tip:

If you get powder residue or soft crumble, give it 6–12 more hours or even a full 48-hour cure time depending on humidity.

Fizzl Tablet Test – In-Water Performance

Test Conditions:

- Warm water used (approx. 40–50°C)
- Mixture stirred gently to simulate usage
- Small test volume (~15ml) used for precision

Observations:

- Mild fizzing started immediately?
- Foam developed on the surface?
- Water turned smooth and milky?
- Light specks remained (likely SCI – normal behaviour)?
- Lavender scent gently released and not overpowering?

Verdict:

- ✓ The formula performs well
- ✓ Skin feel is pleasant and non-drying
- ✓ Tablet dissolves evenly with minimal residue
- ✓ Ready for full bottle testing and feedback stage

Fizzl Storage & Curing Tips

During Curing (Post-Mold):

- Cure in a cool, dry place – avoid bathrooms or steamy kitchens
 - Allow 24–48 hours minimum for full hardness
- Cover loosely with a paper towel to prevent dust but allow airflow
- Avoid stacking molds or sealing them during this stage

Optional Tips:

- A desk fan or dehumidifier nearby can speed up curing
 - Avoid direct sunlight – heat can soften or activate fizzing prematurely
-

After Demolding (Finished Tablets):

- Store in an airtight container – glass jar, metal tin, or sealed plastic
 - Keep away from moisture and humidity
 - For long-term storage, consider adding a food-safe silica gel packet
 - Label each batch with a “Best Before” date (12 months is safe guideline)
-

Avoid:

- Leaving tablets exposed to air for long periods
- Mixing scented and unscented tablets in the same container (scent bleed)

Fizzl Packaging Guidelines (Starter Level)

Home or Gifting:

- Glass jars or metal tins (reuse-friendly!)
- Kraft paper pouches with resealable lining
- Tie with string or label stickers for a handmade touch
 - Add a small instruction tag:
“Drop into 250ml warm water. Shake. Pump. Enjoy!”

Small-Batch Retail / Markets:

- Eco-friendly compostable pouches (lined for moisture protection)
 - Clear ingredient list in descending order
- Include allergens + scent type (lavender, unscented, etc.)
 - Optional: QR code for usage video or eco-message

Required (UK Commercial Sale):

- Ingredient INCI names (if going fully retail)
- Contact info of maker (email or social handle)
- Batch code or ID (e.g., BATCH01-LAV-MAR24)
